Introducing new Multi-Species Functionality for the Delmhorst BDX-30 and JX-30 Moisture Meters and *EDGE*® app!

Navigate through any job faster than ever with the help of the new **Multi-Species functionality** for the BDX-30 and JX-30 moisture meters and *EDGE*® app!

The meter and app update lets you save, analyze, and export readings of multiple species or materials ***without having to delete previous readings saved on the meter***.

Restoration technicians now can compile all their readings (wood, drywall, relative, etc.) into one moisture report without the need for multiple exports.

Dry kiln operators can measure and track the %MC of different species in multiple kilns, or within a single kiln if running a multi-species charge.

The new multi-species functionality is free of charge. Just update the *EDGE*® app to the latest version (7.83).

Once the app is updated, you can update your BDX-30 and JX-30 meters by connecting to the app and proceeding with the prompted firmware update.

The app update is available now and is backward compatible with current meter versions. The firmware update will be released on April 23.
